

# Not many mechanical rooms could handle an undetected backflow discharge of up to 800 GPM.

Flooding is the second greatest cause of property damage according to insurance industry experts. The risks of not having a monitoring system in a basement or mechanical room are many.

## The Consequences Can Be Costly:

- Property damage
- Equipment damage
- Mold proliferation
- Water supply contamination
- Dangers to public safety
- Unnecessary liability insurance claims and insurance premium inflation
